

APEX Corp Enterprise Multi-Department Voice Receptionist

Project Documentation & GitHub Repository Guide

Recommended Repository Name: apex-enterprise-voice-receptionist

Assistant: Ava **Platform:** Vapi + n8n **Backend:** n8n mock tools

1. Project Overview

Ava is an enterprise voice receptionist designed to answer incoming calls, identify the caller's intent, handle common requests, and route callers to the appropriate APEX Corp department. The solution covers HR, Finance, Sales, IT, Support, and Reception use cases.

2. Department Routing

Department	Primary Handling
HR	Check job openings or route to HR
Finance	Check invoice/payment status or route to Finance
Sales	Capture sales lead or route to Sales
IT	Collect employee/ticket information or route to IT
Support	Collect ticket information or route to Support
Reception	Handle general requests and direct callers

3. Backend Tools

Tool	Purpose	Mock Result
route_call	Department transfer	Transferring → sip:sales@voice.apex.com / x4081
check_job_openings	HR job lookup	Software Engineer - Austin; HR Manager - Remote
check_invoice_status	Finance invoice lookup	Paid; \$4500.00; due 2026-07-20
capture_sales_lead	Create sales lead	Lead Logged; DEAL-8821
send_confirmation	Email confirmation	sent / email

4. Vapi Assistant Configuration

Assistant name: Ava - APEX Corp Receptionist. The published configuration uses GPT-4.1, Soniox transcription, and an Elliot voice. Ava speaks first with the greeting: "Thank you for calling APEX Corp, this is Ava. How may I direct your call today?" The five backend tools are connected to the n8n webhook endpoint.

n8n webhook: <https://shaik-mohammad-shaheed.app.n8n.cloud/webhook/apex-receptionist-tools>

5. Test Scenarios

Scenario	Expected Result
----------	-----------------

HR: engineering jobs	check_job_openings returns available roles and Ava reads the result.
Finance: invoice status	check_invoice_status returns payment status; confirmation can be sent by email.
Sales: connect to representative	route_call is invoked and Ava announces the Sales transfer.

6. Production Readiness / Future Integration

- Replace mock SIP routing with a live Twilio/SIP integration.
- Connect HR job lookup to Greenhouse.
- Connect invoice status to Stripe.
- Connect sales lead capture to HubSpot.
- Pass caller name, initial intent, and conversation summary as SIP handoff metadata.
- Perform end-to-end tests for HR, Finance, and Sales flows.
- Include the Loom/YouTube demonstration and configuration exports in the final submission.

7. Suggested GitHub Repository Structure

```

```

8. Repository Naming Recommendation

Use: apex-enterprise-voice-receptionist

It is short, professional, directly describes the project, and works well as a GitHub repository name.

Note: This document summarizes the implemented assessment setup and distinguishes mock backend/SIP behavior from production integrations that still need to be configured.
